Northshore Neuromuscular Clinic - ALS Program

1200 Lakeview Avenue, Kingston, Ontario K7L 3N6 Tel 613-555-0198

Clinic Letter - Follow-up Visit

Patient: Jordan Ellis
DOB: 1968-11-03
MRN: NNC-0071935
Health card: 8812-447-310-KT
Address: 44 Birch Crescent, Kingston, Ontario
Phone: 613-555-0177
Email: j.ellis68@example.org
Visit date: 2026-10-21
Clinician: Dr. Samuel Okafor, MD FRCPC (Neurology)
cc: Dr. Helen Brandt (family physician); Maria Ellis (spouse, next of kin)

Diagnosis

Amyotrophic lateral sclerosis, bulbar onset. Symptom onset 2025-06 with slurred speech; diagnosed 2025-12 (Gold Coast criteria met). Now with upper-limb involvement bilaterally.

Genetics

SOD1 heterozygous pathogenic variant c.14C>T (p.Ala5Val; legacy A4V). C9orf72 repeat expansion negative. Pharmacogenomic panel: CYP2D6 poor metabolizer; CYP1A2 normal metabolizer.

Current medications

1. Riluzole oral suspension 50 mg twice daily (since 2026-01)
2. Glycopyrrolate oral solution 1 mg three times daily (since 2026-05)
3. Citalopram 10 mg daily (since 2026-03)
4. Pantoprazole 40 mg daily

Allergies

Penicillin (hives). No other known drug allergies.

Symptoms reported today

- Drooling: still troublesome despite glycopyrrolate, severity 4/5, worse when talking.
- Pseudobulbar affect: episodes of uncontrollable crying several times a week, severity 3/5.
- Speech: dysarthric, understood by family only; uses a text-to-speech app.
- Swallowing: chokes on thin liquids and dry solids; uses thickened fluids. PEG discussed.
- Low mood, severity 2/5, improving on citalopram.
- Occasional muscle cramps in forearms, severity 1/5.
- Constipation, severity 2/5.

Laboratory results

Test	Result	Reference	Date
Creatine kinase	312 U/L	< 195	2026-10-21
ALT	28 U/L	< 40	2026-10-21
eGFR	81 mL/min/1.73m2	> 60	2026-10-21
Neurofilament light (serum)	112 pg/mL	< 20	2026-09-30
QTc (ECG)	452 ms	< 450	2026-10-21
Sodium	139 mmol/L	135-145	2026-10-21

Function

ALSFRS-R 34/48 (bulbar 5/12, fine motor 9/12, gross motor 9/12, respiratory 11/12). Decline of about 1.1 points/month since diagnosis. FVC 71% sitting, 63% supine. Weight 72.0 kg (from 79.5 kg at diagnosis). Grip right 21 kg, left 19 kg.

Trials

Screened for NCT04856982 (ATLAS, presymptomatic SOD1 study) - not eligible as already symptomatic. Interested in recruiting trials for SOD1-ALS.

Goals

Keep communicating with family; reduce drooling and crying episodes; avoid choking.

Plan

Discuss SOD1-directed therapy. Review drooling management. Recheck labs in 3 months.

SYNTHETIC RECORD - fictional patient generated for BioHacks 2026 testing. Not a real person.
